Catalyst Communications Technologies Forges New Corporate Identity

Leading Radio over IP Solutions provider to the Mobile Radio Market re-positions to meet growing demand for Network based IP radio connectivity

February 3, 2003 - Lynchburg, VA

The leading provider of Radio over IP solutions to the land mobile radio marketplace, Catalyst Communications Technologies, has changed its corporate image and moniker to reflect its growing position as a leader of Network based IP connectivity. This re-branding comes as an acknowledgement of the company's highly successful deployment of Radio over IP solutions to customers in the Public Safety, Utility, and Federal government marketplaces. This image is represented here:

Catalyst has growing brand recognition as a leader in Radio over IP applications for mobile radio customers, and our new image represents our promise to our customers and supporters - Number One in leadership and technology." said Robin Grier, president of Catalyst.

Catalyst's mission is to make mobile radio voice communications more accessible to people. The company leverages its expertise in IP networking, advanced data processing, mobile radio knowledge, and intuitive user interface technologies to bring this about. Catalyst provides Voice over IP solutions for the mobile radio industry, connecting users on personal computers anywhere across a managed network with field personnel using portable and/or mobile radios. Voice and control are transported over the network between Remote PC users and a Catalyst Gateway, which interfaces to a radio or base station.

"Catalyst is providing cost effective Radio over IP communications solutions for many customers, parlaying our advanced technology into products that outperform the competition at lower prices." said Jack Kelly, vice president of sales and marketing. "Our new image represents the forwardness of our thinking, our technology, and our market position."
